DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method of identifying a condition in an individual, classified in class 435, subclass 1+.
- II. Claims 13-23, drawn to a method of treating an individual against the risk of cardiovascular disease, classified in class 514, subclass 311, 419, 439, 460, and 510.
- III. Claims 13 and 24, drawn to a method of treating an individual employing gene therapy, classified in class 536, subclass 23.1+.
- IV. Claims 25-28, drawn to a kit for identifying a condition in an individual, classified in class 424, subclass 1.11 – 1.89 and 9.1 to 9.81.

The inventions are distinct, each from the other because of the following reasons:

Inventions IV and II-III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of treating an individual against the risk of cardiovascular disease can be practiced with a materially different product such as aspirin.

Inventions I and II-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. The invention of Group I functions to identify an condition in an individual and the invention of Group II-III function to treat an individual against the risk of cardiovascular disease.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The invention of Group II operates by administering to the individual a medicament, while the invention of Group III operates by gene therapy.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because the above restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See M.P.E.P. Sec. 812.01.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
